- (continue) **LAB**
- **Q & A**

# Be precise...

n.md 

the `\$\_POST` variable. We can

```
33      <!-- Missing ; is intended: to avoid copy-pasting! -->
34      ```php
35          echo "<br>";
36      +   print_r($_POST["username"]);
37          echo "<br>";
38          print_r($_POST["password"]);
39      ```
```

# Web Communications...

**How does a browser communicates with the server?**

# Web Communications...

- REST
- ~~GRAPHQL~~
- ~~Web~~sockets

# REST Guidelines...

- Client-server
- Stateless (contain all information needed)
- Cache
- Uniform interface

# How to recognise REST...

- GET
- POST
- PUT
- PATCH
- DELETE

# How do **requests** work...

**Harry**

# How do **requests** work...

**Harry**

# How do **requests** work...

**Harry**

**Sunshine.com**

# How do **requests** work...

# How do **requests** work...

**Harry**

How to get the  
latest weather  
forecast?

# How do **requests** work...

**Harry**

# How do **requests** work...

**Harry**

**Websockets:**  
(keep the  
connection open )  
So the server can  
**keep** sending info

# How does **login** work...

**Harry**

# How does **login** work...

**Harry**

**hotmail.com**

# How does **login** work...

**Harry**

**POST**

**username + password**

**Succes /fail**

**hotmail.com**

# How do **login** work...

**Harry**

**GET /emails**

**hotmail.com**

# How to recognise REST...

- **GET** : obtain information from server
- **POST** : send information to server
  
- **PUT** : change existing information on a server
- **PATCH** : partial change of information on a server
- **DELETE** : remove information from server

Q&A

????

(Later)

**LAB!**

# Rules

- **Share** your screen
- **1 driver** – 2 or 3 **navigators**
- **Rotate** after every **task**
- Use the **webserver** at **cakes.codaisseur.academy**
- **Take breaks** (**set a 20 min timer**)
- **Test, Test, Test, Test, Test, Test, Test**
- Use **Google** or **DuckDuckGo**
- Use **w3schools.com**
- Use **reader.codaisseur.com**

# DO 1:

Meet in **Discord** group x

1. **SSH** into **`cakes0x.codaisseur.academy`**
2. Install **mysql**
3. Install **apache2**
4. Install **php**

# DO 2:

1. Make **database** (in mysql)
2. Make **table** called **recipes** (in mysql) (find requirements in data)
3. Add **given data** (to the cakes table)
4. Build a website called **Codaisseur cakes** (index.html)
5. Host website at **cakes0x.codaisseur.academy**
6. Show a **list** of cakes with their ingredients (count)
7. Add **search** functionality
8. Add a **add a recipe** functionality

# Search functionality...

1. Add a form to your website
2. Add a text input field within the form tags
3. Add a submit button within the form tags
4. Make sure the form has a attribute: **method="POST"**
5. Make sure the form has a attribute:  
**action="<filename>.php"**

# Add a recipe functionality...

**Add \*** to be able to **add recipes** to the **database**

**DB info**

**<https://www.db-fiddle.com/f/bx7Qviz3NNFG98Nzyow7aQ/8>**

# Groups

- 1. Pepijn, Marcin, Yann**
- 2. Shangram, Raj, Camilia**
- 3. Yvonne, Prawesh, Ximena,**
- 4. Willemijn, Tjitze, Bozana, Filipe**
