

Kali Linux

... in the Codaïsseur Academy Cloud

IMPORTANT: The Kali Linux Cloud is here to help you if you are having trouble running Kali on your own. Your experience might be better running it on your local machine though. So try that first.

Please use the Kali Remote Desktops responsibly! There is a lot of illegal stuff that you can do with Kali, but obviously that is not allowed. Stick to the assignments we give you, but also play and experiment, but: responsibly!

1. Install the Remote Desktop Client

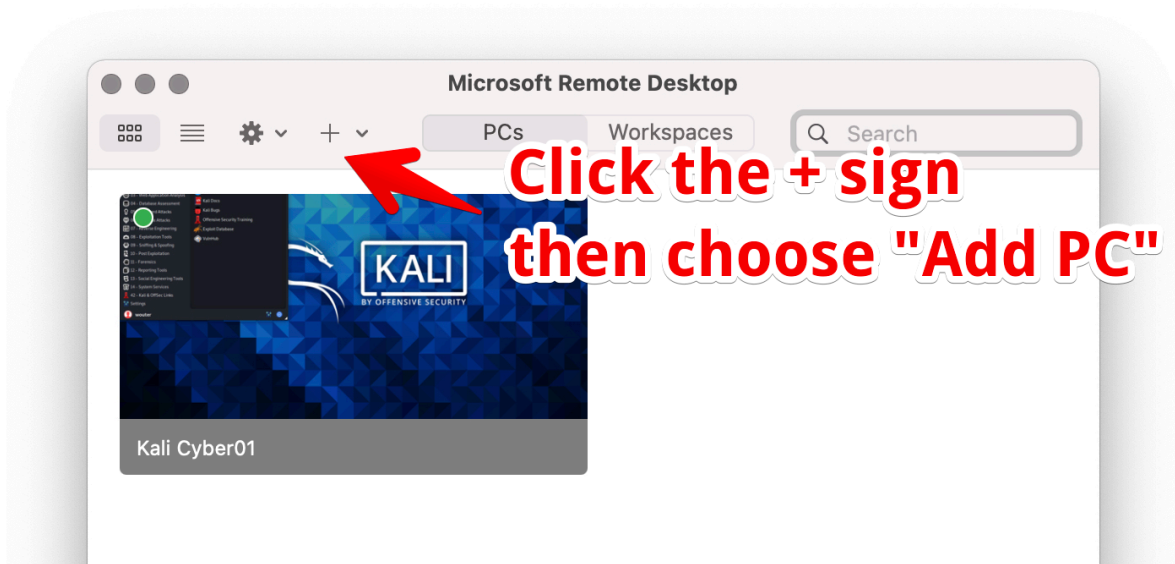

Start by installing the Remote Desktop Client for your operating system here: <https://docs.microsoft.com/en-us/windows-server/remote/remote-desktop-services/clients/remote-desktop-clients>

2. Connect to a Codaïsseur Kali Cloud Instance

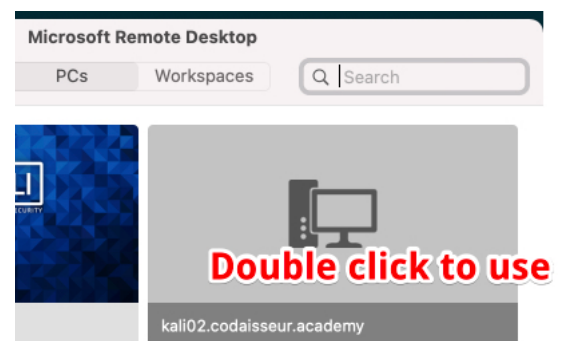

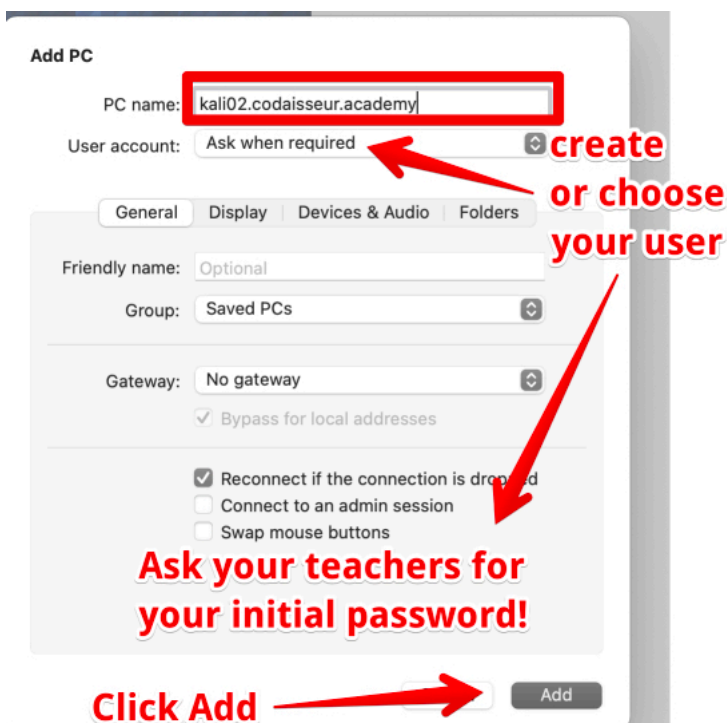

We have 3 Kali Cloud Instances. These are their hostnames:

- kali01.codaïsseur.academy
- kali02.codaïsseur.academy
- kali03.codaïsseur.academy

You may choose any one of these you want. If you find that the instance is slow / unresponsive, you may log out and try another one.

3.

Change your default password

You got a random password from us. That's not ideal: it is hard to remember, and it also know to others. Change it after you logged in by opening a Terminal on you Kali session and type:

```
$ passwd
```

This will prompt you for the current password, then the new. **Note that you have to do this on every Kali instance separately!**
